

Quiz 5. Bayesian reasoning

WIN envelope

LOSE envelope

Someone draws an envelope at random and offers to sell it to you. Before deciding, you are allowed to see one bead drawn from the envelope.

Suppose it's black: How much should you pay?

Suppose it's white: How much should you pay?

$$P(\text{win} | b) = \alpha P(b | \text{win}) P(\text{win}) = \alpha \cdot \frac{3}{5} \cdot \frac{1}{2} = \alpha \cdot \frac{3}{10}$$

$$P(\text{-win} | b) = \alpha P(b | \text{-win}) P(\text{-win}) = \alpha \cdot \frac{2}{5} \cdot \frac{1}{2} = \alpha \cdot \frac{2}{10}$$

If b then pay $\$ \frac{3}{5} = 60$ cents

$$P(\text{win} | w) = \alpha P(w | \text{win}) P(\text{win}) = \alpha \cdot \frac{2}{5} \cdot \frac{1}{2} = \alpha \cdot \frac{2}{10}$$

$$P(\text{-win} | w) = \alpha P(w | \text{-win}) P(\text{-win}) = \alpha \cdot \frac{3}{5} \cdot \frac{1}{2} = \alpha \cdot \frac{3}{10}$$

If w then pay $\$ \frac{2}{5} = 40$ cents
