

# MEMORABLE VIM COMMANDS

Author: Jonathan Funk

spaces denotes a sequence, pay attention to capitals!, <value> can be whatever you want, red denotes holding the keys, blue denotes a comment

Inputs	Description / Action
<code>:q</code> OR <code>:q!</code> OR <code>:wq</code>	in order: quit, force quit, write (save) then quit
<code>esc</code> OR <code>i</code>	in order: cancel current command (including insert), insert mode
<code>navigation: b</code> OR <code>e</code> OR <code>w</code> OR <code>G</code> OR <code>gg</code> OR <code>\$</code>	in order: back to front of last word, end of next word, beginning of next word (some special chars are considered words), jump to EOF, jump to top, end of current line
<code>d i &lt;char&gt;</code>	delete all strings within the delimiters eg: cursor was in string "stu ff" and you used di" you end up with " "
<code>d \$</code>	delete all past cursor til new line
<code>d G d i</code>	delete from cursor until EOF
<code>d t &lt;char&gt;</code>	delete til char encountered
<code>ctrl+v gg I &lt;char&gt;</code> <code>esc</code>	prepend char to cl of each row from cursor until top of file, you can substitute the gg for any navigation option
<code>yy</code>	yank current line into buffer without deleting
<code>V</code>	block level select
<code>p</code>	paste current buffer
<code>dd</code>	delete the line and place in buffer
<code>a</code>	move right, insert mode (good for getting at that pesky EOL)
<code>o</code>	move down to new line then enter insert mode
<code>y</code>	copy
<code>vi -p</code> <code>&lt;filename&gt;,...</code>	loads all files into vi's tabedit system
<code>:tabedit &lt;filename&gt;</code>	places file in buffer for switching to and editing concurrently
<code>gt</code>	switch to next file
<code>gT</code>	switch to previous file
<code>:qa</code>	quit all tabs

<code>g k J</code>	Moves current line to line above without leading whitespace
<code>V /&lt;string&gt;</code>	copy all til line with found term
<code>ctrl+n ctrl+p</code>	show a list of autocompletes for the given term currently selected line of file, enter to select
<code>shift+5</code>	jump to matching sibling bracket
<code>:%s/FIND/REPLACE/gc</code>	replaces all "FIND" occurrences in file with "REPLACE" and the tail c will prompt a confirm for each found
<code>:12,20s/FIND/REPLAC E/g</code>	replaces "FIND" occurrences in line range 12-20 with "REPLACE", notice lack of c, no confirm prompt
<code>/&lt;string&gt;</code>	looks for this pattern, press n or shift+N to move to next/previous occurrence
<code>{ OR }</code>	Move up or down to next empty line (move by paragraph)
<code>V =</code>	auto-indent selected code
<code>V &gt; OR V &lt;</code>	shift (indent) selected code block right or left
<code>.</code>	repeat last command (less keystrokes = quicker work!)
<code>d { OR d }</code>	delete previous OR next code block (newline separated)
